
MISHICOT'S NEW WATER SUPPLY — This is the 150-foot, 50,000 gallon capacity water tower at Mishicot which is in the process of completion as part of the extensive program of water and sewer construction work which is expected to be completed by the year's end. The tower is being built by the Pittsburgh-Des Moines Co. on the north side of the village hall, the highest elevation in the community. Currently almost half of the project is completed, according to Hugo Holst, village president. Already completed is the well, drilled by the Layne Northwest Co., while the sewage disposal plant, built by the Hedrick Company of Chilton, is also nearly completed. All of the sewer and water mains laying work is being done by the Muth-Knechtel Co., of Manitowoc. (Photo by staff photographer.)
